Sign up .Welcome to Wise Words for Week Three of the 5 Week Course: Noble Quotations for Mental Toughness. The second part of our mental toughness training series is under way. In Week Two we talked about how to accomplish on demand concentration and focus. We also talked about how to practice mindfulness. These topics are highly applicable in daily life. In the Noble Quotations for Mental Toughness course, we will be referencing the Tao Te Ching of Lao Tzu, the essence of the Book of Ecclesiastes, and the teachings of Confucius. The course also incorporates the teachings of the developmental psychologist Erik Erikson and the principles of the religious psychology of Joseph Campbell. To begin, I would like to start by providing an overview of the five week program. It is a five-week course that will run roughly 30 minutes each week. The course will be recorded so that you can access it at your convenience. You will need to access the course in the following ways: To be able to access each week's lessons, you need to click on the picture of each lesson. Each lesson will be an mp3 file. You will also need to access each week's lessons individually in order to be able to listen to them. This will be an mp3 file of approximately three minutes. You can also access the teachings of the course through the public readings from the book of Joel Osteen that I have incorporated into the course. Please click here to go to this site to access the readings in their original format. You will also need to have the book of Joel Osteen open while you listen to these readings. If you have any difficulties accessing the recordings, please contact me at the following e

The problem I have is that it appears to not be reading the values from the DataSet if you were to create a WindowsForms.DataSet instance. However, when you created a dummy WindowsForms.Form with a WindowsForms.DataSet instance to hold the data, it reads the values. Here are two snippets of code to further illustrate: public partial class Form1 : Form { public Form1() { InitializeComponent(); } private void Form1_Load(object sender, EventArgs e) { //Works: forms a dummy Forms.DataSet and loads it with data. DataSet myDummyDataSet = new DataSet("myDummyDataSet"); myDummyDataSet.ReadXml("myDummyFile.xml"); //Works: a WindowsForms.DataSet instance loads the data from the DataSet created above. DataSet myRealDataSet = new WindowsForms.DataSet("myRealDataSet"); myRealDataSet.ReadXml("myRealFile.xml"); } } A: The DataSet has not been explicitly initialized, when you call DataSet.ReadXml() it creates the datatable for you and deserializes the data from the provided XML. Therefore, you have to call ReadXml() in your constructor: private void Form1_Load(object sender, EventArgs e) { //Works: forms a dummy Forms.DataSet and loads it with data. DataSet myDummyDataSet = new DataSet("myDummyDataSet"); myDummyDataSet.Read
